

Maintenance Instructions: **ProtectOHM**

APPLICATION INSTRUCTIONS FOR #137 PROTECHOHM:

Floor Surfaces should be swept prior to washing to remove loose dirt and soil.

For use in daily or frequent damp mopping, use a dilute solution of 8-10 ounces of Stat-Clean per gallon of cold or warm water. Mop the floor lightly and allow it to dry. Do not rinse.

ProtectOHM may also be diluted 6-8 ounces per gallon of cold or warm water and applied through an automatic scrubber equipped with a soft white polishing or slightly coarser red spray buffing pad depending on the prevailing soil conditions. A blue cleaning pad may also be used for heavy soil conditions, but use could reduce the gloss of the finish.

For heavier soil conditions, sweep or vacuum the floor to remove loose soil or dirt. Dilute 10 ounces of cleaner per gallon of cold or warm water and use as a mopping solution. After cleaning, the floor may be spray buffed with DuraGloss or re-coated with DuraGuard.

Do not use plain water or regular all-purpose cleaners for maintaining conductive finishes.
